

The Power of Evolut^[10]n

Take a leap into the future starting today.

Meet us at
Intersolar in Munich
14.06. - 16.06. 2023 | Booth A2.120

SURFACE

SURFACE can manufacture modules in widths of up to 1300 mm and lengths of 2300 mm, in line with your individual requirements.

Discover the world's most powerful ECA cell connecting machine.

SURF-UP

SURF-UP treats manufactured shingle matrices with greatest sensitivity and precision so as to position the matrix (group of solar cells) and encapsulate materials meticulously while causing no damage. Further processing for cross-connection can then subsequently be carried out as a standardized process.

Maximum precision and sensitive treatment of the cell matrix by SURF-UP.

SURF-X

SURF-X, an ECA auto bussing machine, uses electrically conductive adhesive (ECA) and connects the module matrix through to the junction box in a cross- and interconnected fashion.

Maximum performance for your success – cross- and interconnectivity with SURF-X.

Benefit from innovative design capabilities, maximised performance and German-made precision.
